Attempt : 1 Total Mark : 10 Marks Obtained : 9

Section 1: MCQ

- 1. Consider an implementation of an unsorted singly linked list. Suppose it has its representation with a head pointer only. Given the representation, which of the following operations can be implemented in O(1) time?
- i) Insertion at the front of the linked list
- ii) Insertion at the end of the linked list
- iii) Deletion of the front node of the linked list
- iv) Deletion of the last node of the linked list

Answer

I and III

2. The following function takes a singly linked list of integers as a parameter and rearranges the elements of the lists.

The function is called with the list containing the integers 1, 2, 3, 4, 5, 6, 7 in the given order. What will be the contents of the list after the function completes execution?

```
struct node {
  int value:
  struct node* next:
};
void rearrange (struct node* list) {
  struct node *p,q;
  int temp;
  if (! List || ! list->next) return;
  p=list; q=list->next;
  while(q) {
    temp=p->value; p->value=q->value;
    q->value=temp;p=q->next;
    q=p?p->next:0;
  }
}
Answer
2, 1, 4, 3, 6, 5, 7
Status: Correct
```

3. Given the linked list:  $5 \rightarrow 10 \rightarrow 15 \rightarrow 20 \rightarrow 25 \rightarrow NULL$ . What will be the output of traversing the list and printing each node's data?

Marks: 1/1

# Answer

5 10 15 20 25

Status: Correct Marks: 1/1

4. In a singly linked list, what is the role of the "tail" node?

#### Answer

It stores the last element of the list

Status: Correct Marks: 1/1

5. Given a pointer to a node X in a singly linked list. If only one point is given and a pointer to the head node is not given, can we delete node X from the given linked list?

## Answer

Possible if X is not last node.

Status: Correct Marks: 1/1

6. Which of the following statements is used to create a new node in a singly linked list?

```
struct node {
  int data;
  struct node * next;
}
typedef struct node NODE;
NODE *ptr;
Answer
ptr = (NODE*)malloc(sizeof(NODE));
Status : Correct
```

7. Consider the singly linked list: 15 -> 16 -> 6 -> 7 -> 17. You need to

Marks: 1/1

What will be the final linked list after the deletion?

delete all nodes from the list which are prime.

#### Answer

15 -> 16 -> 6

8. The following function reverse() is supposed to reverse a singly linked list. There is one line missing at the end of the function.

What should be added in place of "/\*ADD A STATEMENT HERE\*/", so that the function correctly reverses a linked list?

```
struct node {
  int data:
  struct node* next;
static void reverse(struct node** head_ref) {
  struct node* prev = NULL;
  struct node* current = *head_ref;
  struct node* next;
  while (current != NULL) {
    next = current->next;
    current->next = prev;
    prev = current;
    current = next;
  /*ADD A STATEMENT HERE*/
Answer
*head_ref = prev;
                                                                  Marks: 1/1
Status: Correct
```

9. Linked lists are not suitable for the implementation of?

#### Answer

Binary search

Status: Correct Marks: 1/1

10. Consider the singly linked list:  $13 \rightarrow 4 \rightarrow 16 \rightarrow 9 \rightarrow 22 \rightarrow 45 \rightarrow 5 \rightarrow 16 \rightarrow 6$ , and an integer K = 10, you need to delete all nodes from the list that are less than the given integer K.

What will be the final linked list after the deletion?

# Answer

16 -> 22 -> 45 -> 16

Status: Wrong Marks: 0/1

REC\_DS using C\_Week 2\_MCQ\_Updated

Attempt : 1 Total Mark : 20

Marks Obtained: 18

Section 1: MCQ

1. What is the main advantage of a two-way linked list over a one-way linked list?

#### Answer

Two-way linked lists allow for traversal in both directions.

Status: Correct Marks: 1/1

2. Which of the following is false about a doubly linked list?

# Answer

Implementing a doubly linked list is easier than singly linked list

3. What does the following code snippet do?

```
struct Node* newNode = (struct Node*)malloc(sizeof(struct Node));
newNode->data = value;
newNode->next = NULL;
newNode->prev = NULL;
```

# Answer

Creates a new node and initializes its data to 'value'

Status: Correct Marks: 1/1

4. What will be the output of the following program?

```
#include <stdio.h>
#include <stdlib.h>
struct Node {
  int data:
  struct Node* next;
  struct Node* prev;
};
int main() {
  struct Node* head = NULL;
  struct Node* tail = NULL;
  for (int i = 0; i < 5; i++) {
    struct Node* temp = (struct Node*)malloc(sizeof(struct Node));
    temp->data = i + 1;
    temp->prev = tail;
    temp->next = NULL;
    if (tail != NULL) {
      tail->next = temp;
    } else {
      head = temp;
    tail = temp;
  struct Node* current = head;
```

```
while (current != NULL) {
    printf("%d ", current->data);
    current = current->next;
}
    return 0;
}
Answer
1 2 3 4 5
```

Status: Correct Marks: 1/1

5. What happens if we insert a node at the beginning of a doubly linked list?

# Answer

The previous pointer of the new node is NULL

Status: Correct Marks: 1/1

6. What will be the effect of setting the prev pointer of a node to NULL in a doubly linked list?

#### Answer

The node will become the new head

Status: Correct Marks: 1/1

7. Which of the following is true about the last node in a doubly linked list?

#### Answer

Its next pointer is NULL

Status: Correct Marks: 1/1

8. How many pointers does a node in a doubly linked list have?

#### Answer

2

Status: Correct Marks: 1/1

9. Which of the following information is stored in a doubly-linked list's nodes?

# **Answer**

All of the mentioned options

Status: Correct Marks: 1/1

10. Which pointer helps in traversing a doubly linked list in reverse order?

#### Answer

prev

Status: Correct Marks: 1/1

11. Where Fwd and Bwd represent forward and backward links to the adjacent elements of the list. Which of the following segments of code deletes the node pointed to by X from the doubly linked list, if it is assumed that X points to neither the first nor the last node of the list?

A doubly linked list is declared as

```
struct Node {
    int Value;
    struct Node *Fwd;
    struct Node *Bwd;
);
```

#### Answer

```
X-\>Bwd-\>Fwd = X-\>Fwd; X-\>Fwd-\>Bwd = X-\>Bwd;
```

12. What will be the output of the following code?

```
#include <stdio.h>
#include <stdlib.h>
struct Node {
  int data;
  struct Node* next:
  struct Node* prev;
};
int main() {
  struct Node* head = NULL:
  struct Node* temp = (struct Node*)malloc(sizeof(struct Node));
  temp->data = 2;
  temp->next = NULL;
  temp->prev = NULL;
  head = temp;
  printf("%d\n", head->data);
  free(temp);
  return 0:
}
Answer
2
                                                                  Marks: 1/1
Status: Correct
```

13. What is the correct way to add a node at the beginning of a doubly linked list?

#### Answer

```
void addFirst(int data){ Node* newNode = new
Node(data); newNode->prev = head; head = newNode;}
```

Status: Wrong Marks: 0/1

14. Which of the following statements correctly creates a new node for a

# doubly linked list?

#### Answer

```
struct Node* newNode = (struct Node*) malloc(sizeof(struct Node));
```

Status: Correct Marks: 1/1

15. Consider the following function that refers to the head of a Doubly Linked List as the parameter. Assume that a node of a doubly linked list has the previous pointer as prev and the next pointer as next.

Assume that the reference of the head of the following doubly linked list is passed to the below function 1 <--> 2 <--> 3 <--> 4 <--> 5 <--> 6. What should be the modified linked list after the function call?

```
Procedure fun(head_ref: Pointer to Pointer of node)
  temp = NULL
  current = *head_ref
  While current is not NULL
    temp = current->prev
    current->prev = current->next
    current->next = temp
    current = current->prev
  End While
  If temp is not NULL
    *head_ref = temp->prev
  Fnd If
End Procedure
Answer
6 <--&gt; 5 &lt;--&gt; 4 &lt;--&gt; 3 &lt;--&gt; 2 &lt;--&gt; 1.
Status: Correct
```

Marks: 1/1

16. What is a memory-efficient double-linked list?

#### Answer

Each node has only one pointer to traverse the list back and forth

Status: Wrong Marks: 0/1

17. How do you delete a node from the middle of a doubly linked list?

#### Answer

All of the mentioned options

Status: Correct Marks: 1/1

18. How do you reverse a doubly linked list?

# Answer

By swapping the next and previous pointers of each node

Status: Correct Marks: 1/1

19. Which code snippet correctly deletes a node with a given value from a doubly linked list?

```
void deleteNode(Node** head_ref, Node* del_node) {
   if (*head_ref == NULL || del_node == NULL) {
      return;
   }
   if (*head_ref == del_node) {
      *head_ref = del_node->next;
   }
   if (del_node->next != NULL) {
      del_node->next->prev = del_node->prev;
   }
   if (del_node->prev != NULL) {
      del_node->prev->next = del_node->next;
   }
   free(del_node);
}
```

# Answer

Deletes the first occurrence of a given data value in a doubly linked list.

Status: Correct Marks: 1/1

20. Consider the provided pseudo code. How can you initialize an empty two-way linked list?

**Define Structure Node** 

data: Integer

prev: Pointer to Node next: Pointer to Node

**End Define** 

Define Structure TwoWayLinkedList

head: Pointer to Node tail: Pointer to Node

**End Define** 

#### Answer

struct TwoWayLinkedList\* list = malloc(sizeof(struct TwoWayLinkedList)); list->head = NULL; list->tail = NULL;

Section 1: MCQ

1. What will be the output of the following code?

```
#include <stdio.h>
#define MAX_SIZE 5
void push(int* stack, int* top, int item) {
   if (*top == MAX_SIZE - 1) {
      printf("Stack Overflow\n");
      return;
   }
   stack[++(*top)] = item;
}
int pop(int* stack, int* top) {
   if (*top == -1) {
      printf("Stack Underflow\n");
      return -1;
   }
```

```
return stack[(*top)--];
int main() {
  int stack[MAX_SIZE];
  int top = -1;
  push(stack, &top, 10);
  push(stack, &top, 20);
  push(stack, &top, 30);
  printf("%d\n", pop(stack, &top));
  printf("%d\n", pop(stack, &top));
  printf("%d\n", pop(stack, &top));
  printf("%d\n", pop(stack, &top));
  return 0;
}
Answer
302010Stack Underflow-1
Status: Correct
```

2. In the linked list implementation of the stack, which of the following operations removes an element from the top?

Marks: 1/1

Answer

Pop

Status: Correct Marks: 1/1

3. A user performs the following operations on stack of size 5 then which of the following is correct statement for Stack?

```
push(1);
pop();
push(2);
push(3);
pop();
push(2);
```

<pre>pop(); pop(); push(4); pop(); pop(); push(5);</pre>	
Answer	
Overflow Occurs	
Status: Wrong	Marks : 0/1
4. When you push an element onto a linked list-based stack, wh the new element get added?	ere does
Answer	
At the beginning of the list	
Status: Correct	Marks : 1/1
5. The result after evaluating the postfix expression 10 5 + 60 6	/ * 8 - is
Answer	
142	
Status: Correct	Marks : 1/1
6. Which of the following operations allows you to examine the element of a stack without removing it?	top
Answer	
Peek	
Status: Correct	Marks : 1/1
7. Elements are Added on of the Stack.	

#### Answer

Top

Status: Correct Marks: 1/1

8. Pushing an element into the stack already has five elements. The stack size is 5, then the stack becomes

## Answer

Overflow

Status: Correct Marks: 1/1

9. Which of the following Applications may use a Stack?

#### Answer

All of the mentioned options

Status: Correct Marks: 1/1

10. Here is an Infix Expression: 4+3\*(6\*3-12). Convert the expression from Infix to Postfix notation. The maximum number of symbols that will appear on the stack AT ONE TIME during the conversion of this expression?

#### Answer

4

Status: Correct Marks: 1/1

11. The user performs the following operations on the stack of size 5 then at the end of the last operation, the total number of elements present in the stack is

```
push(1);
pop();
push(2);
push(3);
```

pop(); push(4); pop(); pop(); push(5);

1

Status: Correct Marks: 1/1

12. What is the advantage of using a linked list over an array for implementing a stack?

#### Answer

Linked lists can dynamically resize

Status: Correct Marks: 1/1

13. In an array-based stack, which of the following operations can result in a Stack underflow?

# **Answer**

Popping an element from an empty stack

Status: Correct Marks: 1/1

14. What is the value of the postfix expression 6324 + - \*?

# Answer

-18

Status: Correct Marks: 1/1

15. What is the primary advantage of using an array-based stack with a fixed size?

#### Answer

Efficient memory usage

Status: Correct Marks: 1/1

16. In a stack data structure, what is the fundamental rule that is followed for performing operations?

## Answer

First In First Out

Status: Wrong Marks: 0/1

17. Consider the linked list implementation of a stack.

Which of the following nodes is considered as Top of the stack?

# Answer

First node

Status: Correct Marks: 1/1

18. Consider a linked list implementation of stack data structure with three operations:

push(value): Pushes an element value onto the stack.pop(): Pops the top element from the stack.top(): Returns the item stored at the top of the stack.

Given the following sequence of operations:

push(10);pop();push(5);top();

What will be the result of the stack after performing these operations?

#### Answer

The top element in the stack is 5

# 19. What will be the output of the following code?

```
#include <stdio.h>
#define MAX_SIZE 5
int stack[MAX_SIZE];
int top = -1;
void display() {
  if (top == -1) {
     printf("Stack is empty\n");
  } else {
    printf("Stack elements: ");
    for (int i = top; i >= 0; i--) {
       printf("%d ", stack[i]);
    }
    printf("\n");
  }
void push(int value) {
  if (top == MAX_SIZE - 1) {
    printf("Stack Overflow\n");
  } else {
    stack[++top] = value;
  }
int main() {
  display();
  push(10);
  push(20);
  push(30);
  display();
  push(40);
  push(50);
  push(60);
  display();
  return 0;
}
```

#### **Answer**

Stack is emptyStack elements: 30 20 10Stack OverflowStack elements: 50 40 30

Status: Correct Marks: 1/1

20. What will be the output of the following code?

```
#include <stdio.h>
#define MAX_SIZE 5
int stack[MAX_SIZE];
int top = -1;
int isEmpty() {
  return (top == -1);
int isFull() {
  return (top == MAX_SIZE - 1);
void push(int item) {
  if (isFull())
    printf("Stack Overflow\n");
  else
    stack[++top] = item;
int main() {
  printf("%d\n", isEmpty());
  push(10);
  push(20);
  push(30);
  printf("%d\n", isFull());
  return 0;
}
Answer
10
```

Section 1: MCQ

1. In what order will they be removed If the elements "A", "B", "C" and "D" are placed in a queue and are deleted one at a time

#### Answer

**ABCD** 

Status: Correct Marks: 1/1

2. Which of the following can be used to delete an element from the front end of the queue?

#### Answer

public Object deleteFront() throws emptyDEQException(if(isEmpty())throw new emptyDEQException("Empty");else{Node temp = head.getNext();Node cur = temp.getNext();Object e = temp.getEle();head.setNext(cur);size--;return e;}} Status: Correct Marks: 1/1

3. In linked list implementation of a queue, the important condition for a queue to be empty is?

#### Answer

FRONT is null

Status: Correct Marks: 1/1

4. In a linked list implementation of a queue, front and rear pointers are tracked. Which of these pointers will change during an insertion into a non-empty queue?

#### Answer

Only rear pointer

Status: Correct Marks: 1/1

5. When new data has to be inserted into a stack or queue, but there is no available space. This is known as

#### Answer

overflow

Status: Correct Marks: 1/1

6. Front and rear pointers are tracked in the linked list implementation of a queue. Which of these pointers will change during an insertion into the EMPTY queue?

#### Answer

Both front and rear pointer

```
7. What is the functionality of the following piece of code?
public void function(Object item)
  Node temp=new Node(item,trail);
  if(isEmpty())
    head.setNext(temp);
    temp.setNext(trail);
  else
    Node cur=head.getNext();
    while(cur.getNext()!=trail)
      cur=cur.getNext();
    cur.setNext(temp);
  size++;
Answer
Insert at the rear end of the dequeue
Status: Correct
                                                                   Marks: 1/1
8. What will be the output of the following code?
#include <stdio.h>
#define MAX_SIZE 5
typedef struct {
  int arr[MAX_SIZE];
  int front;
  int rear;
  int size;
```

} Queue;

void enqueue(Queue\* queue, int data) {

```
if (queue->size == MAX_SIZE) {
    return;
  }
  queue->rear = (queue->rear + 1) % MAX_SIZE;
  queue->arr[queue->rear] = data;
  queue->size++;
int dequeue(Queue* queue) {
  if (queue->size == 0) {
    return -1;
  int data = queue->arr[queue->front];
  queue->front = (queue->front + 1) % MAX_SIZE;
  queue->size--;
  return data;
int main() {
  Queue queue;
  queue.front = 0;
  queue.rear = -1;
  queue.size = 0;
  enqueue(&queue, 1);
  enqueue(&queue, 2);
  enqueue(&queue, 3);
  printf("%d ", dequeue(&queue));
  printf("%d ", dequeue(&queue));
  enqueue(&queue, 4);
  enqueue(&queue, 5);
  printf("%d ", dequeue(&queue));
  printf("%d ", dequeue(&queue));
  return 0;
}
Answer
1234
Status: Correct
```

9. What will the output of the following code?

Marks: 1/1

```
#include <stdio.h>
#include <stdlib.h>
typedef struct {
  int* arr;
  int front:
  int rear;
  int size:
} Queue;
Queue* createQueue() {
  Queue* queue = (Queue*)malloc(sizeof(Queue));
  queue->arr = (int*)malloc(5 * sizeof(int));
  queue->front = 0;
  queue->rear = -1;
  queue->size = 0;
  return queue;
int main() {
  Queue* queue = createQueue();
  printf("%d", queue->size);
  return 0;
}
Answer
0
Status: Correct
```

10. The essential condition that is checked before insertion in a queue is?

Marks: 1/1

Answer

Overflow

Status: Correct Marks: 1/1

11. Which operations are performed when deleting an element from an array-based queue?

Answer

Dequeue

Status: Correct Marks: 1/1

12. Which one of the following is an application of Queue Data Structure?

### Answer

All of the mentioned options

Status: Correct Marks: 1/1

13. After performing this set of operations, what does the final list look to contain?

```
InsertFront(10);
InsertFront(20);
InsertRear(30);
DeleteFront();
InsertRear(40);
InsertRear(10);
DeleteRear();
InsertRear(15);
display();
Answer
```

10 30 40 15

Status: Correct Marks: 1/1

14. What will be the output of the following code?

```
#include <stdio.h>
#include <stdlib.h>
#define MAX_SIZE 5
typedef struct {
  int* arr;
  int front;
  int rear;
```

```
int size;
} Queue;
Queue* createQueue() {
  Queue* queue = (Queue*)malloc(sizeof(Queue));
  queue->arr = (int*)malloc(MAX_SIZE * sizeof(int));
  queue->front = -1;
  queue->rear = -1;
  queue->size = 0;
  return queue;
int isEmpty(Queue* queue) {
  return (queue->size == 0);
int main() {
  Queue* queue = createQueue();
  printf("Is the queue empty? %d", isEmpty(queue));
  return 0;
}
Answer
Is the queue empty? 1
Status: Correct
                                                                 Marks: 1/1
```

15. Which of the following properties is associated with a queue?

## Answer

First In First Out

Status: Correct Marks: 1/1

16. A normal queue, if implemented using an array of size MAX\_SIZE, gets full when

#### Answer

Rear = MAX\_SIZE - 1

17. What are the applications of dequeue?

# Answer

All the mentioned options

Status: Correct Marks: 1/1

18. What does the front pointer in a linked list implementation of a queue contain?

# Answer

The address of the first element

Status: Correct Marks: 1/1

19. Insertion and deletion operation in the queue is known as

# Answer

Enqueue and Dequeue

Status: Correct Marks: 1/1

20. The process of accessing data stored in a serial access memory is similar to manipulating data on a

#### Answer

Stack

Status: Wrong Marks: 0/1

Section 1: MCQ

1. Which of the following is a valid preorder traversal of the binary search tree with nodes: 18, 28, 12, 11, 16, 14, 17?

# Answer

18, 12, 11, 16, 14, 17, 28

Status: Correct Marks: 1/1

2. Find the preorder traversal of the given binary search tree.

# Answer

9, 2, 1, 6, 4, 7, 10, 14

3. Find the pre-order traversal of the given binary search tree.

# Answer

1, 4, 2, 18, 14, 13

Status: Wrong Marks: 0/1

4. Which of the following is the correct in-order traversal of a binary search tree with nodes: 9, 3, 5, 11, 8, 4, 2?

#### **Answer**

2, 3, 4, 5, 8, 9, 11

Status: Correct Marks: 1/1

5. How many distinct binary search trees can be created out of 4 distinct keys?

#### **Answer**

14

Status: Correct Marks: 1/1

6. While inserting the elements 71, 65, 84, 69, 67, 83 in an empty binary search tree (BST) in the sequence shown, the element in the lowest level is

# Answer

83

Status: Wrong Marks: 0/1

7. Find the in-order traversal of the given binary search tree.

#### **Answer**

1, 2, 4, 13, 14, 18

Status: Correct Marks: 1/1

8. While inserting the elements 5, 4, 2, 8, 7, 10, 12 in a binary search tree, the element at the lowest level is \_\_\_\_\_.

# **Answer**

7

Status: Wrong Marks: 0/1

9. Which of the following operations can be used to traverse a Binary Search Tree (BST) in ascending order?

#### Answer

Inorder traversal

Status: Correct Marks: 1/1

10. Find the postorder traversal of the given binary search tree.

#### Answer

1, 4, 2, 18, 14, 13

Status: Correct Marks: 1/1

11. The preorder traversal of a binary search tree is 15, 10, 12, 11, 20, 18, 16, 19. Which one of the following is the postorder traversal of the tree?

### Answer

11, 12, 10, 16, 19, 18, 20, 15

12. In a binary search tree with nodes 18, 28, 12, 11, 16, 14, 17, what is the value of the left child of the node 16?

### Answer

11

Status: Wrong Marks: 0/1

13. Which of the following is the correct post-order traversal of a binary search tree with nodes: 50, 30, 20, 55, 32, 52, 57?

## Answer

20, 30, 32, 52, 57, 55, 50

Status: Wrong Marks: 0/1

14. Which of the following is the correct pre-order traversal of a binary search tree with nodes: 50, 30, 20, 55, 32, 52, 57?

# **Answer**

50, 30, 20, 32, 55, 52, 57

Status: Correct Marks: 1/1

15. Find the post-order traversal of the given binary search tree.

# Answer

10, 17, 20, 18, 15, 32, 21

Section 1: MCQ

1. Consider the Quick Sort algorithm, which sorts elements in ascending order using the first element as a pivot. Then which of the following input sequences will require the maximum number of comparisons when this algorithm is applied to it?

#### **Answer**

22 25 56 67 89

Status: Correct Marks: 1/1

2. Which of the following modifications can help Quicksort perform better on small subarrays?

# Answer

Switching to Insertion Sort for small subarrays

Status: Correct Marks: 1/1

3. Is Merge Sort a stable sorting algorithm?

#### Answer

Yes, always stable.

Status: Correct Marks: 1/1

4. Which of the following statements is true about the merge sort algorithm?

## Answer

It requires additional memory for merging

Status: Correct Marks: 1/1

5. In a quick sort algorithm, where are smaller elements placed to the pivot during the partition process, assuming we are sorting in increasing order?

#### Answer

To the left of the pivot

Status: Correct Marks: 1/1

6. What is the best sorting algorithm to use for the elements in an array that are more than 1 million in general?

# **Answer**

Quick sort.

Status: Correct Marks: 1/1

7. Which of the following is true about Quicksort?

#### Answer

It is an in-place sorting algorithm

Status: Correct Marks: 1/1

8. Why is Merge Sort preferred for sorting large datasets compared to Quick Sort?

#### Answer

Merge Sort has better worst-case time complexity

Status: Correct Marks: 1/1

9. Which of the following strategies is used to improve the efficiency of Quicksort in practical implementations?

# Answer

Choosing the pivot randomly or using the median-of-three method

Status: Correct Marks: 1/1

10. What happens during the merge step in Merge Sort?

#### Answer

Two sorted subarrays are combined into one sorted array

Status: Correct Marks: 1/1

11. Let P be a quick sort program to sort numbers in ascending order using the first element as a pivot. Let t1 and t2 be the number of comparisons made by P for the inputs {1, 2, 3, 4, 5} and {4, 1, 5, 3, 2}, respectively. Which one of the following holds?

#### Answer

t1 > t2

Status: Correct Marks: 1/1 12. Merge sort is \_\_\_\_\_. Answer Comparison-based sorting algorithm Status: Correct Marks: 1/1 13. The following code snippet is an example of a quick sort. What do the 'low' and 'high' parameters represent in this code? void quickSort(int arr[], int low, int high) { if (low < high) { int pivot = partition(arr, low, high); quickSort(arr, low, pivot - 1); quickSort(arr, pivot + 1, high); } } Answer The range of elements to sort within the array Status: Correct Marks: 1/1 14. In a quick sort algorithm, what role does the pivot element play? Answer It is used to partition the array Marks: 1/1 Status: Correct

15. Which of the following scenarios is Merge Sort preferred over Quick Sort?

#### Answer

When sorting linked lists

Status: Correct Marks: 1/1

16. Which of the following methods is used for sorting in merge sort?

#### Answer

merging

Status: Correct Marks: 1/1

17. What is the main advantage of Quicksort over Merge Sort?

# Answer

Quicksort requires less auxiliary space

Status: Correct Marks: 1/1

18. Which of the following sorting algorithms is based on the divide and conquer method?

## Answer

Merge Sort

Status: Correct Marks: 1/1

19. What happens when Merge Sort is applied to a single-element array?

## Answer

The array remains unchanged and no merging is required

Status: Correct Marks: 1/1

20. Which of the following is not true about QuickSort?

#### Answer

It can be implemented as a stable sort

Marks Obtained: 17

Section 1: MCQ

1. In the division method of hashing, the hash function is typically written as:

# Answer

h(k) = k % m

Status: Correct Marks: 1/1

2. In C, how do you calculate the mid-square hash index for a key k, assuming we extract two middle digits and the table size is 100?

#### Answer

((k \* k) / 10) % 100

Status: Wrong Marks: 0/1

3. What is the primary disadvantage of linear probing?

# **Answer**

Clustering

Status: Correct Marks: 1/1

4. In division method, if key = 125 and m = 13, what is the hash index?

# Answer

8

Status: Correct Marks: 1/1

5. Which C statement is correct for finding the next index in linear probing?

# **Answer**

index = (index + 1) % size;

Status: Correct Marks: 1/1

6. Which of the following best describes linear probing in hashing?

#### Answer

Resolving collisions by linearly searching for the next free slot

Status: Correct Marks: 1/1

7. In linear probing, if a collision occurs at index i, what is the next index checked?

#### Answer

(i + 1) % table\_size

8. What does a deleted slot in linear probing typically contain?

## Answer

A special "deleted" marker

Status: Correct Marks: 1/1

9. Which of the following statements is TRUE regarding the folding method?

#### Answer

It divides the key into parts and adds them.

Status: Correct Marks: 1/1

10. Which of the following values of 'm' is recommended for the division method in hashing?

#### Answer

A power of 2

Status: Wrong Marks: 0/1

11. What is the initial position for a key k in a linear probing hash table?

#### Answer

k % table\_size

Status: Correct Marks: 1/1

12. What is the worst-case time complexity for inserting an element in a hash table with linear probing?

#### Answer

O(n)

13. What is the output of the mid-square method for a key k = 123 if the hash table size is 10 and you extract the middle two digits of k \* k?

#### Answer

1

Status: Correct Marks: 1/1

14. Which folding method divides the key into equal parts, reverses some of them, and then adds all parts?

## Answer

Folding reversal method

Status: Correct Marks: 1/1

15. In the folding method, what is the primary reason for reversing alternate parts before addition?

#### Answer

To reduce the chance of collisions caused by similar digit patterns

Status: Correct Marks: 1/1

16. Which data structure is primarily used in linear probing?

# Answer

Array

Status: Correct Marks: 1/1

17. Which of these hashing methods may result in more uniform distribution with small keys?

#### Answer

Mid-Square

Status: Correct Marks: 1/1

18. What would be the result of folding 123456 into three parts and summing: (12 + 34 + 56)?

# Answer

102

Status: Correct Marks: 1/1

19. What happens if we do not use modular arithmetic in linear probing?

# **Answer**

Index goes out of bounds

Status: Correct Marks: 1/1

20. Which situation causes clustering in linear probing?

## Answer

Sequential key insertion

Status: Wrong Marks: 0/1
